

KNOVERA ENTERPRISE AI USE GUIDELINES

Document ID: PDF-AI-2026

Effective Date: February 2026

1. Purpose and Scope

This guideline governs the safe implementation of LLMs and RAG systems.

All generative responses must be backed by verified vector retrieval.

2. Safety Thresholds

Queries with semantic relevance scores below the safety threshold must be gracefully refused to prevent ungrounded responses.

3. Multi-Tenant Protection

Each client workspace maintains distinct MongoDB vector collections.

Data is encrypted at rest and in transit across all endpoints.
